

## GUIDE 01

## How the website works

Where your content lives, how it reaches the website, and the one rule that explains almost every problem.

### Two halves that work together

|             |                                                                                                                                                                                                     |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| The website | <code>www.therobonest.com</code> , hosted on Netlify. Fast, always online, and nobody needs to log in to it.                                                                                        |
| Odoo        | Your business system, at <code>https://odoo.therobonest.com/web/login</code> . This is where blog posts, events, videos, team members, school logos, the About page text and social links are kept. |

The website reads from Odoo by itself. Publish something in Odoo and the website shows it within 5 minutes. It also works the other way: website enquiries become **Leads** in CRM, and event sign-ups appear under the event's **Attendees**.

**Saving is not publishing.** Nothing reaches the website until its **Published** switch is on. After publishing, allow up to **5 minutes**, then reload the page twice.

### Why up to 5 minutes?

The website keeps a ready-made copy of every page so visitors never wait. Every 5 minutes it asks Odoo for changes and refreshes that copy. The first visitor after the 5 minutes triggers the refresh; the next one sees the new content. That is why you reload twice.

### What is managed where

| Content                       | Where in Odoo                           | Guide |
|-------------------------------|-----------------------------------------|-------|
| Events, photos, registrations | Events                                  | 02    |
| Blog posts                    | Website → Blog Posts                    | 03    |
| Team members                  | Employees                               | 04    |
| Partner school logos          | Contacts (tag School)                   | 05    |
| Videos                        | eLearning (page currently switched off) | 06    |
| About page text               | Knowledge → "Website: About"            | 07    |
| Social media icons            | Website editor, footer                  | 08    |
| Enquiries                     | CRM → Leads (arrive by themselves)      | 09    |

## What is not in Odoo

A few things rarely change, so they are built into the website: the home page headline and videos, the three lab descriptions, the statistics, the hardware showcase, the Institution Gallery photos and clips, the contact details, and Nesty the robot's answers. Changing these is a small developer job (guide 15).

Tags decide *where* something appears (home page, popup, filters). See guide 10. When something is missing, see guide 11.
