

GUIDE 02

Adding and managing events

Create an event, add its description, photos and videos, take registrations, promote it in the popup, and remove it.

Saving is not publishing. Nothing reaches the website until its **Published** switch is on. After publishing, allow up to **5 minutes**, then reload the page twice.

Create an event

Events → New

1. **Event Name.**
2. **Date:** start and end. **The end date decides** whether it shows under Upcoming or moves into the past timeline. There is no other setting.
3. **Venue / Address:** shown as the location.
4. **Cover image:** the card picture and the page banner.
5. **Tags:** `Popup`, `Homepage` or `Info Only` if needed (below).
6. Switch **Published** on.

It appears under **Upcoming events** on the Events page and gets its own page. When the end date passes it moves into **Our journey so far** automatically.

Add the description, photos and videos

Events → the event → Go to Website → Edit

The description is **not** on the event form. Odoo only shows it through the website editor. Click **Go to Website** at the top of the event, then **Edit**. The page body is the description.

1. Write the details or the recap in the page body.
2. **Drag photos in**, as many as you like.
3. Paste each **YouTube link on a line of its own**.
4. Click **Save**.

The photos become a **"How it went"** gallery with a full-screen viewer, and YouTube links become video players. The layout does not need to be tidy; the website lifts the photos and videos out of the text.

Do not use the **Notes & Documents** tab. It is internal and never appears on the website.

Three kinds of event

You want	Do this	The website shows
People to register online	Just set future dates	"Registration open" and a sign-up form
An announcement with no sign-up	Add the tag <code>Info Only</code>	"Announcement", no form, a contact link
A finished event	Nothing, the end date passing is enough	"Completed" and the photo gallery

The popup and Nesty's announcement

Tag one upcoming event `Popup`. It becomes the small card in the corner of every page, and Nesty the robot mentions it in the chat. If several events carry the tag, the soonest one wins. If none is tagged, the next upcoming event is used. Remove the tag to stop promoting it.

Registrations

[Events](#) → [the event](#) → [Attendees](#)

Website sign-ups land here, next to walk-ins in the Registration Desk. The form only shows while the event is published, registrations are open in Odoo, and it is not tagged Info Only. Closing registrations in Odoo hides the form.

Edit or remove an event

- **Edit:** open it, change anything, save. The website follows within 5 minutes.
- **Hide it:** switch **Published** off. It disappears from the website but stays in Odoo with its registrations.
- **Past events** are part of the public timeline. Unpublish only events you never want shown.
- **Delete** only if it must be gone from Odoo too. Its page link will stop working.
