

GUIDE 03

Writing blog posts

Write, publish, feature, edit and remove articles, and set how they appear on Google.

Saving is not publishing. Nothing reaches the website until its **Published** switch is on. After publishing, allow up to **5 minutes**, then reload the page twice.

Write a post

Website → Blog Posts → New

1. **Title:** the page heading and the browser tab.
2. **Subtitle:** the line under the title on cards and on the page.
3. **Body:** write in the editor. **Drag photos straight in.** To add a YouTube video, paste its link on a line of its own.
4. **Tags:** pick from the list (guide 10). **Homepage** features the post.
5. **SEO** (the globe icon): fill in **Meta Title** and **Meta Description**. This is what Google shows in search results.
6. Switch **Published** on.

The post appears as a card on the Blog page, gets its own page, and is added to the sitemap for Google automatically. Nesty the robot also recommends posts at random on the Blog page.

Formatting is restyled to match the website, so every post looks consistent whatever you do in the editor. Keep headings short and paragraphs readable on a phone.

Good practice

- A clear title of 5 to 10 words, and a Meta Description of one or two sentences (about 150 characters).
- At least one photo near the top.
- One or two topic tags (**AI & Robotics** , **Astronomy** , **Announcement**) so readers can filter.

Edit or remove a post

- **Edit:** open the post, change it, save.
- **Take it down:** switch **Published** off. It leaves the website and the sitemap but stays in Odoo.
- **Delete** only if it must be gone from Odoo as well.
