

GUIDE 06

Videos (YouTube)

How YouTube videos are added, and why the Videos page is currently switched off.

Currently switched off. RoboNest has no YouTube videos yet, so the Videos page, its menu link and the home page playlist are hidden. Your own lab clips are shown in the **Institution Gallery** on the home page instead. When real videos are on YouTube, add them as below and ask the developer to switch the page back on (a one-line change, guide 15).

Add a video

eLearning → a course → Add Content → Video

1. Open or create a **course**. The course name becomes the filter button on the Videos page, so name it well: "Lab Setup", "Student Projects", "Astronomy", "Events".
2. Choose **Add Content** → **Video** and **paste the YouTube link**. Odoo fills in the title, thumbnail and length by itself.
3. **Tags**: `Homepage` to feature it on the home page; `Short` for a vertical (phone-shaped) video.
4. Switch **Published** on.

Order, edit, remove

- **Order**: drag videos up and down inside the course. That order is used on the website.
- **Edit**: open the video and change the link or title.
- **Remove**: switch Published off, or delete the content item.

Only YouTube links are used. Nothing is uploaded to Odoo or the website, so videos cost no storage.

The videos currently in eLearning point at placeholder links from the website build. Replace or delete them before the page is switched on.
