

GUIDE 09

Enquiries and event registrations

Where website enquiries and event sign-ups arrive in Odoo, and what to check if one seems missing.

Enquiries become CRM Leads

[CRM → Leads](#)

Both enquiry forms, the "**Book a Demo Lab Setup**" panel (header and home page button) and the long form at the bottom of the home page, create a **Lead** within seconds. Nothing needs setting up.

Lead title	"Lab enquiry - (school name)", or the person's name if no school was given
Contact fields	Name, phone, email (optional on the demo panel), designation, state
Internal notes	Requirement, subject, school, designation and state, plus "Submitted via the therobonest.com enquiry form"

Work them like any other lead: assign, schedule a call, convert to an opportunity.

Event sign-ups become Attendees

[Events → the event → Attendees](#)

Name, email and phone of each person who registers on the website, next to walk-ins in the Registration Desk.

If one seems missing

1. Look under **Leads**, not Opportunities. Leads are hidden from the pipeline view by default.
2. Clear the search filters (the default filter can hide other people's leads).
3. The visitor only sees "Thank you" after Odoo has accepted the lead. If they saw an error, nothing was created; they can try again or use WhatsApp.
4. If every enquiry has stopped arriving, contact the developer: the connection between the website and Odoo needs attention (guide 13).

Nesty the robot

Nesty answers common questions from a fixed script and always offers **WhatsApp (8860788886)** and a **call-back**, which opens the enquiry form. It never invents prices or promises. Changing its answers is a developer job (guide 15).
