

GUIDE 12

Domain and DNS setup

How therobonest.com is configured today, what each record does, and how to keep it working.

Who handles what

Domain registrar	GoDaddy (registration, renewal and billing)
DNS (the records)	GoDaddy, nameservers <code>ns55.domaincontrol.com</code> and <code>ns56.domaincontrol.com</code>
Website hosting	Netlify, site <code>therobonest.netlify.app</code>
Odoo	Odoo Online, database <code>robonest-private-limited</code>
Email	Google Workspace

The domain expires on 1 October 2026. Turn on auto-renew in GoDaddy with a valid card, or renew manually for several years. If it lapses, the website, the Odoo login and all company email stop at once.

The addresses

Website	<code>https://www.therobonest.com</code> (<code>therobonest.com</code> redirects to it)
Odoo login	<code>https://odoo.therobonest.com/web/login</code>
Odoo fallback address	<code>https://robonest-private-limited.odoo.com</code> . Always works, even if the custom domain has a problem.
Old Odoo links	<code>therobonest.com/web/...</code> , <code>/odoo</code> and <code>/my/...</code> forward to the Odoo address automatically

DNS records at GoDaddy

Type	Name	Value	Purpose
A	@	75.2.60.5	Bare domain to Netlify. GoDaddy has no ALIAS record, so Netlify's documented A record is used.
CNAME	www	therobonest.netlify.app	The website
CNAME	odoo	robonest-private-limited.odoo.com	Odoo login and back office
MX (5)	@	aspmx.l.google.com (1), alt1 and alt2 (5), alt3 and alt4 (10)	Google Workspace email
TXT	@	google-site-verification=...	Google verification

TXT	@	v=spf1 include:dc-aa8e722993._spf.therobonest.com ~all	Email sending (SPF)
TXT	dc-aa8e722993._spf	v=spf1 include:_spf.google.com ~all	Email sending (SPF, part 2)
TXT	_dmarc	v=DMARC1; p=quarantine; ...	Email protection (DMARC)
CNAME	_domainconnect	_domainconnect.gd.domaincontrol.com	GoDaddy internal

Never edit the MX or TXT records unless you are changing email providers. They keep company email working. Do not turn on GoDaddy "Forwarding" or "Parking" for the domain: either one replaces the website's A record.

HTTPS certificates

- Website: issued by Netlify (Let's Encrypt) for both `therobonest.com` and `www.therobonest.com`, renewed automatically.
- Odoo: issued by Odoo (Let's Encrypt) for `odoo.therobonest.com`, renewed automatically.

Both renew only while the DNS records above stay as they are.

Recommended next steps

- **DKIM** is not set up for email. Turn it on in Google Admin (Apps → Google Workspace → Gmail → Authenticate email) and add the TXT record it gives you. With DMARC on "quarantine", DKIM keeps company mail out of spam.
- In Netlify, **www.therobonest.com** should be the **primary domain** (Domain management → Options → Set as primary domain).
- Keep the four GoDaddy domain locks on. They stop anyone moving or changing the domain.

If the website stops loading

1. Check the domain has not expired (GoDaddy → My Products).
2. Check the `A @` and `CNAME www` records still match the table above.
3. Staff can always reach Odoo at `https://robonest-private-limited.odoo.com` in the meantime.
