

GUIDE 14

Accounts, security and handover

Who owns which account, what each one costs, and the steps to take full ownership of the website.

The accounts behind the website

Account	What it holds	Billing
GoDaddy	The domain therobonest.com and its DNS	Yearly domain renewal (next: 1 October 2026)
Odoo Online	All content, CRM, events, employees	Your existing Odoo subscription
Netlify	The website hosting	Free plan is enough for this site's traffic; check the plan in the account
GitHub	The website's code and full history	Free
Google Workspace	Company email on the domain	Your existing subscription
Google Search Console	How Google sees the site	Free

Each account should be owned by a RoboNest email address, with a second RoboNest person as backup where the service allows it.

Taking ownership, step by step

1. **GoDaddy**: confirm the account is RoboNest's, auto-renew is on, and the card is valid.
2. **GitHub**: create a RoboNest account or organization. The developer transfers the repository (Settings → Transfer ownership); accept within a day.
3. **Netlify**: create a RoboNest account and team, invite the developer, and the developer transfers the site to your team. Then reconnect it to the transferred GitHub repository (Site configuration → Build & deploy → Link repository) and confirm one deploy runs.
4. **Check the settings survived**: the four Odoo settings in guide 13 must be present in your Netlify site.

Security steps

1. **New API key**. In Odoo, create a dedicated user such as "Website API" with access only to CRM, Events, Blog, eLearning, Employees, Contacts and Knowledge. Log in as it, open Preferences → Account Security → New API Key.
2. Put the new key and that user's email into Netlify (guide 13) and redeploy.
3. **Delete the old key** in Odoo. The key used while building the site was shared during development and must not stay active.
4. **Remove developer access** you no longer need: the Netlify team, GitHub collaborators and any developer Odoo user. If the developer stays on for support, keep access but under your ownership.

Never paste the API key into email, chat or documents. If it is ever exposed, repeat steps 1 to 3.

What you receive at handover

- This set of guides (01 to 15) and the developer reference in the code repository (`docs/WEBSITE-GUIDE.md`).
- Ownership of the GitHub repository and the Netlify site.
- The domain setup as described in guide 12.

Do not uninstall the Odoo **Website** app. The blog, events, social links and the Odoo login address depend on it, even though the public website now runs on Netlify.
